

PiaVal

AIR FRESHENER FROM GERMANY

Pig Perfume

Pig Perfume

This perfume prevents biting and fighting when merging or transporting different pig groups.

It covers up their typical individual scent.

Cannibalistic actions like tail and ear biting and general aggressions are mostly prevented.

Provides long lasting freshness and offers reliable protection against unpleasant odors in the pig sty and environment.

PiaVal AIR FRESHENER FROM GERMANY is suitable for pigs and chicken.

To avoid hierarchy fights, aggressions and biting during building of new groups and transport. Generally calming pigs of all life cycles, they are enjoying pleasant scent in their sty. Environmentally and neighbour friendly.

PiaVal AIR FRESHENER FROM GERMANY can be used to reduce stinking of pig and chicken slurry.

Pig houses and environment will take advantage of reduced bad smell in the neighbourhood.

Result:

to find new hierarchy, the pigs fight viciously. Especially piglets, weaners and young sows fight after regrouping, biting their neighbors' legs, tails and ears. This all will get worse when tail docking will be prohibited. You can imagine the extreme stress leading to reduced weight gain, wounds, infections, diarrhea and even complete loss of otherwise excellent piglets and sows.

Easy to apply, economic and low cost per pig!

How to apply *PiaVal* ?

AIR FRESHENER FROM GERMANY

Closed Pig Houses:

- ✓ Vaporize 1-2% solution in the air over the pigs or spray directly on pigs and especially pigs snout. Every 1 to 2 weeks.

Open Pig Houses:

- ✓ Spray (empty) pig sties, lorries and pigs, eventually with knapsack sprayer. More often, mainly on pigs.

Be friends with your neighbors!

Slurry is a problem – the pungent fecal odor from pig sties or chicken farms can get the farm into trouble with eventual neighbors. Use **PiaVal** regularly – and the bad odor is almost gone, even when bringing out the slurry to the fields. Chicken growers have reported great changes, when they sprayed the slurry canals and tank.

You reduce the pig's urge to fight before they start with aggressions, as they all smell alike. Spray every 2-4 weeks, you are rewarded with good smell in the compound and more relaxed pigs. Repeating time depends on aeration speed and system.

Can be done at
any age of the animals,
no negative effect!

Concentrated Safety Data:

Contains 3,7-Dimthyl octa-2,6-dien-1-ol	
R43	sensitization by skin contact possible
